

Compact SDX[®] Nozzle

The Compact SDX[®] is a new and improved nozzle, well suited for pilot or small production spray dryers. Featuring easy to assemble, longer lasting parts, it mimics the Mini SDX[®] in size but has a higher flow range with more spray angles.

Hand tighten assembly with a maximum operating pressure of 345 BAR/5000 PSI. Maximum operating temperature to be determined by O-Ring material.

Compact SDX [®] Assembly Description and Part Numbers		
Description	Part Number	Material
(A) Body	W203010035	Stainless Steel
(B) Orifice O-Ring	A313520148	Viton
	W155100149	Silicone
(C) Orifice Disc	W20303-XXX*	Tungsten Carbide
(D) Swirl Chamber	See Swirl Chamber Chart	
(E) Swirl Chamber O-Ring	W203070013	Viton
	W203070021	Silicone
(F) Adaptor O-Ring	A313520148	Viton
	W155100149	Silicone
(G) 1/4 NPTF Adaptor	W203020034	Stainless Steel
3/8 NPTF Adaptor	W205370031	
Thread Guard	W203230013	Brass
Compact/Mini Adaptor	W214510031	Stainless Steel
Removal Tool	W203080012	Brass
Compact SDX [®] Seal Kit	(12 of each O-Ring)	
	W203050015	Viton
	W203060014	Silicone

Compact SDX [®] Swirl Chamber Part Numbers		
Ref	Part Number	Material
SA	W203040016	Tungsten Carbide
SB	W203040024	Tungsten Carbide
SC	W203040032	Tungsten Carbide
SD	W203040040	Tungsten Carbide

* Specify orifice size and swirl chamber suffix from capacity chart, on pages 24-25

Please Note: This chart is only a limited illustration of available sizes. Special materials are available on request for particular applications, please contact us for prices and delivery.

D Swirl Chamber

E Swirl Chamber O-Ring

F Adaptor O-Ring

G Adaptor

Removal Tool

Part No.
W203080012.
For the removal
of Compact SDX®
Swirl Chambers and
Orifice Discs.

Assembly Procedure:

1. Place Nozzle Body **(A)** thread side up on a flat surface
2. Place the Orifice O-Ring **(B)** cone face down into the Nozzle Body **(A)**
3. Place the Orifice Disc **(C)** onto the Orifice O-Ring **(B)** protruding side down
4. Secure the Swirl Chamber O-Ring **(E)** onto the Swirl Chamber **(D)**
5. Place the Swirl Chamber Assembly **(D+E)** swirl side down onto the Orifice Disc **(C)** into Nozzle Body **(A)**
6. Secure the Adaptor O-Ring **(F)** into the recess on Adaptor **(G)**
7. Screw down the Adaptor **(G)** into the Nozzle Body **(A)** securing all components in place and hand tighten only
8. Finally ensure the complete assembly does not rattle

Seal Kits

We supply seal kits for the SDX® Nozzles in various materials. Delavan recommends that seals are changed after each run.

O-Ring Temperature Aptitude Graph (°C)

The O-ring, otherwise known as toroidal seal, is an exceptionally versatile sealing device. Delavan-supplied O-rings are of the highest quality currently available on the market and are specified specifically for our nozzle components. This data sheet offers Delavan O-ring consumers a range of performance and compatibility data from our standard supply materials. We recognise that not all applications are suitable for these standard, readily available materials and offer alternatives to suit individual applications on request. We are also able to offer FDA (Food and Drug Association) approved materials accompanied by a certificate.

SDX® Carbide Reference Guide				
Delavan Reference	Carbide Description	Abrasion	SRS Star Rating Corrosion	Erosion
Standard Grade	General Purpose Tungsten Carbide Used in all of Delavan's SDX® products and suitable for most applications	★★★	★★★	★★★
Standard Plus Grade	General Purpose Tungsten Carbide Improved resistance for use with High Pressure applications	★★★★	★★★★	★★★★
Superior Grade	Specialty Tungsten Carbide Best suited for pure Chemical Resistance with Caustic or Acid materials	★★	★★★★★	★★★★

Delavan's Star Rating System (SRS) outlines three primary properties of wear on our carbide products; abrasion, corrosion and erosion. Scale = Lowest Rating (★) to Highest Rating (★★★★★). The SDX® family of products comes with carbide internal components made from our standard grade of carbide which is noted by our part numbers. Please contact Delavan for questions on our complete line of material selections. Caution: These ratings are subject to each application and should be used as a general guide.

Maintenance Considerations

The Delavan SDX® nozzle range has been specifically designed for high pressure applications with the SDX® III configuration being in service throughout the world for over 40 years. Each component throughout the SDX® range is precision machined to tested and proven dimensions with close tolerances to suit the exacting requirements demanded by the process.

In order to ensure that the nozzles continue to operate effectively, it is vital that each component is handled carefully, ensuring that there is no damage to the components. This is particularly important with the sealing surface areas and the threads. Any slight damage to a sealing face or surface, or to a thread profile, can potentially cause an issue. If there is any doubt about the condition of a component, Delavan would suggest that the item is replaced.

The Delavan SDX® range of nozzles has been operating successfully and safely throughout the world for over 60 years. In developing the SDX® range, independent high pressure cycling and proof pressure testing was commissioned in order to ensure that we can support the ever increasing demands of our customers.

Incorrect orifice and swirl chamber material selection, resulting in premature wear. For advice on material and compatibility contact Delavan.

Damage to threads on SDX® III Nozzle.

Training

The Delavan SDX® range of nozzles are fully supported in the field through organized training sessions and backed by decades of technical experience in spray drying. Delavan offers a maintenance and training program for operators and OEMs to ensure that you have all of the tools necessary for trouble free operation of your spray nozzles.

Some of the topics covered are:

- Maintenance
- Assembly / disassembly
- Inspection of carbide components, the effects of wear, and what to look out for
- Good practice guide
- Cleaning / CIP

SDX® V Spray Dry Nozzle Flow Rate Charts.

Orifice sizes ranging from 0.016" – 0.250" in increments of 0.001" swirl chambers ranging from SA (0.76mm) to SM (16mm). The orifice and swirl chamber sizes below show an example of some possible combinations. With over 220 orifice sizes and 10 swirl chamber variants allows us to find a combination to suit your droplet size, flow rate and spray angle requirements.

All spray angles are based on water at a pressure of 1000 psi (69 bar). The MINI SDX® has a nominal spray angle of 70° – 75° due to it's unique cone faced orifice.
